Two Tables from blog post of November 12, 2021.

Slightly different Spending Rates at Different mixes of stocks can result in exact same portfolio value in a future year.
At $85 \%$ mix, the spending rate needs to be about $3 \%$ less than at $75 \%$.
The safe spending rate can be the same for a lower and a higher mix of stocks.
Safe Spending Rate that hits Percent lower

| Mix of <br> Stocks | same futrure target portfolio <br> value in the 19th year | Safe Rate <br> relative to rate |
| :---: | :---: | :---: |
| $55 \%$ | $4.57 \%$ | $-3.5 \%$ |
| $60 \%$ | $4.63 \%$ | $-2.1 \%$ |
| $65 \%$ | $4.66 \%$ | $-1.5 \%$ |
| $70 \%$ | $4.66 \%$ | $-1.5 \%$ |
| $75 \%$ | $4.73 \%$ | $0.0 \%$ |
| $80 \%$ | $4.67 \%$ | $-1.4 \%$ |
| $85 \%$ | $4.58 \%$ | $-3.3 \%$ |
| $90 \%$ | $4.43 \%$ | $-6.3 \%$ |
| $95 \%$ | $4.40 \%$ | $-6.9 \%$ |

You have a value judgement: do you want to give up a little in current spending for the potential for greater future portfolio value in all but the Most Horrible sequences of returns ever?
At my choice of $85 \%$ mix, I give should target $\sim 3 \%$ less in current spending relative to a mix of $75 \%$ for the expected result of five times more portfolio value per year over the next 20 years.
Assumes initial \$1 million portfolio value.
Compared to Base Case of mix of $75 \%$ stocks

| Mix of Stocks | Safe Spending Rate: hits same target | Lower annual safe spending relative to $\$ 1$ million starting portfolio value | Real portfolio Value in 20th year at expected rates of return* | Difference from base case of 75\% mix | Difference Averaged over 20 years | Ratio: Average Expected Gain divided by Annual Less Spending |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 55\% | 4.57\% | $(\$ 1,660)$ | \$1,107,000 | (\$173,300) | $(\$ 8,670)$ | na |
| 60\% | 4.63\% | (\$970) | \$1,141,800 | (\$138,500) | (\$6,930) | na |
| 65\% | 4.66\% | (\$690) | \$1,187,200 | $(\$ 93,100)$ | $(\$ 4,660)$ | na |
| 70\% | 4.66\% | (\$690) | \$1,241,500 | $(\$ 38,800)$ | $(\$ 1,940)$ | na |
| 75\% | 4.73\% | \$0 | \$1,280,300 | \$0 | \$0 | na |
| 80\% | 4.67\% | (\$640) | \$1,355,400 | \$75,100 | \$3,760 | 5.9 |
| 85\% | 4.58\% | $(\$ 1,550)$ | \$1,442,300 | \$162,000 | \$8,100 | 5.2 |
| 90\% | 4.43\% | $(\$ 2,980)$ | \$1,550,200 | \$269,900 | \$13,500 | 4.5 |
| 95\% | 4.40\% | $(\$ 3,280)$ | \$1,629,500 | \$349,200 | \$17,460 | 5.3 |
| 100\% | 4.39\% | $(\$ 3,279)$ | \$1,707,000 | \$426,700 | \$21,340 | 6.5 |
